

## **The Campbell Plant Should Be The Main Place Now Where the Conservative Republicans of Ottawa County Draw the Line Against the Globalist Agenda**

**By Joseph Parnell McCarter**

Victory in wars is often determined by the location of a pivotal battle, as demonstrated by Napoleon at Austerlitz, Wellington at Waterloo, and Meade at Gettysburg. Globalists have shrewdly chosen electric energy policy as the way to cripple local opposition to their overall agenda. A locality with poor electric energy infrastructure and dependent on outside parties is in a weak position to thwart the globalist agenda.<sup>1</sup> One of Ottawa County's main strengths is its ability to produce by the Campbell plant electric for 1 million regional residents, but minus that plant Ottawa County is vulnerable and dependent, especially at a time of [waning regional electric grid reliability](#). It is not an accident globalists want the Campbell plant closed and demolished in 2025, long before the far more polluting Monroe plant on the east side of the state has to close. This is not about environment; it is about political power. Electric energy is a main area where globalists have chosen to attack and weaken us, and the Campbell plant is where we need to hold the line and not let them do it.

Furthermore, the Campbell plant is a strong position on which for us to fight. First, we have [the legal means in a home rule charter county to municipalize that plant and turn it over to a county electric cooperative](#), and [legal means to delay its demolition before that](#). Michigan constitutional law is clear on this issue. And then Whitmer, Nessel, the Sierra Club, etc. have to negotiate with Ottawa County and the county electric cooperative over when that plant closes. It will be out of the hands of Consumers Energy, and Consumers Energy will have been paid for it. Second, this is an area where all citizens in Ottawa County, and even many citizens outside of Ottawa County, plus parties like Wolverine Power, have a common interest in seeing that plant survive past 2025. We all have a common practical interest in reliable, affordable, environmental electric. Finally, it is [the moral thing to do](#).

Nevertheless, with all of the above said, this "Save The Campbell" effort will stand or fall depending upon whether God should choose to bless it: "The horse is prepared against the day of battle: but safety is of the LORD." We should have [a county charter consistent with the USA's founding Christian constitutional principles](#). We can hardly ask for God's favor if we are unwilling to have a charter pleasing to God. It is possible to have a legal charter pleasing to God, and so that is what we should pray for and seek.
